

The decline in HPV vaccine uptake in Ireland – reversing the trend

The decline in HPV vaccine uptake

HPV vaccine uptake rates in Ireland had fallen from an all time high of 87% to approximately 50% in a short space of time

Emergence of anti HPV vaccine groups

Significant fall off in HPV vaccine uptake in 2016

Negative mainstream and social media coverage around the safety of the vaccine

Initial response

- Plan agreed for September 2016 to provide additional promotion of information about the vaccine safety and effectiveness
- Public relations and media launch
- Use of social media

2017 campaign

- Empowering social media voices
- Working with others
- Reviewing and revising public materials
- Government stakeholders
- Empowering the vaccinators
- Working with international experts

2017 campaign

- Re-building hpv.ie
- Developing a peer led campaign
- Radio advertising
- Empowering staff
- Educating media on the facts
- Working with trusted advisors in the community – GPs and pharmacists
- Major media launch
- Major social media promotion
